

An informative program developed by the Joslin Diabetes Center to provide key insights and clinical approaches to painful diabetic peripheral neuropathy (DPN).

Painful Diabetic Peripheral Neuropathy

AN OFFICE-BASED APPROACH

Joslin Diabetes Center

Joslin Diabetes Center is a leading research-intensive academic medical center whose goal is to cure diabetes and its complications.

This educational program offers:

- Current information for health care providers and office staff on painful DPN pathophysiology, clinical relevance, diagnosis, and management, with an emphasis on risk factors and clinical assessment
- Numerous tools and disease-focused resources to help you educate patients and staff on painful DPN
